

Outreach what to who?

Scientific output:

- Peer-reviewed journal papers
- Talks/posters at conferences
- Deliverables

GAID:

- Space agencies preparing for new missions – EUMETSAT/ESA science advisory groups
- Funding bodies?
- NWP centres

Virtual Observatory

- NWP centres (GRUAN processor)?

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

Further comments

Reaching space agencies:

- Science advisory groups meeting around 2 x per year – give them the documents to read? Attend the meetings to get feedback?
- Do we need to consider what type of satellite instruments the gaps refer to or are the gaps general enough? E.g. just microwave or also infrared?

Outreach to ECMWF:

- Talk at an RD informal seminar
- One-to-one discussions regarding the gaps?
- Note that ECMWF is very busy July – October so outreach should avoid

International TOVS study conference

- Most NWP centres and space agencies will be there
- Typically data assimilation for NWP but climate applications increasingly represented

Working groups making recommendations

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

Collating feedback

- Forms to be filled in and sent to a person collecting feedback
- One person to take charge of collecting feedback, and make a report with suggestions for changes to be circulated?
- One person in charge of GAID feedback, one of VO feedback needs to extract relevant parts from the forms filled in

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.
