

# GAIA-CLIM

## second User Workshop

**Location:**  
BELSPO, Brussels, Belgium

**Date:**  
November 21-23, 2016

**Organisation:**  
Royal Belgian Institute for Space Aeronomy

We are pleased to invite you to attend the second GAIA-Clim User Workshop.

GAIA-Clim is a Horizon 2020 project that aims to improve our ability to use ground-based and sub-orbital observations to characterise satellite observations for a number of atmospheric ECVs. The key GAIA-CLIM outcomes will be a virtual observatory facility of co-locations and their uncertainties and a report on gaps in capabilities or understanding, which shall be used to inform subsequent Horizon 2020 program activities.

The meeting will be held on November 21-23, 2016 at Belspo, Brussels, Belgium.

**The focus of the meeting** shall be

- The review of the latest version of the Gaps Assessment and Impacts Document;
- Discussion about prioritisation from a user perspective and potential remedies;
- First hands-on testing of virtual observatory.

Further details including a preliminary agenda and local logistics will be made available after the deadline for registration of interest.

Please register your interest to [nathalie.kalb@aeronomie.be](mailto:nathalie.kalb@aeronomie.be) no later than September 15th.

organizers:

Martine De Mazière (BIRA-IASB, outreach and dissemination work package lead)

and Peter Thorne (NUIM, project coordinator)

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.
